

THE DRIFTER

The Drifter is a powerful monitoring device which allows you to take control and manage the state of your 12 Volt battery life. It acts as a fuel gauge by monitoring and displaying information such as battery volts and amps, charge/discharge status, remaining capacity and water tank levels. Offering complete battery management data, the Drifter allows you to enjoy stress free travelling.

Key features

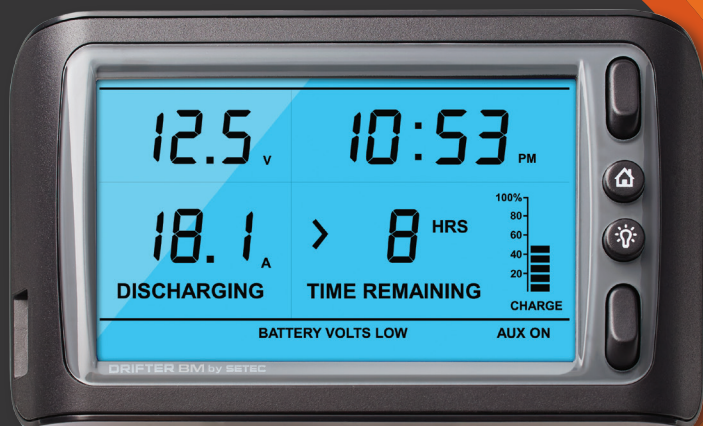

- › Water tank monitoring and pump on/off switch
- › Large LCD screen for day and night viewing
- › Low voltage warning
- › Clock and temperature gauge
- › USB charging port
- › Battery isolator
- › Compatible with any 12V Lead Acid battery

THE DRIFTERBM

The DrifterBM is a revolutionary device that continuously monitors 12 Volt lead acid batteries. The DrifterBM is vital to making an accurate estimate of remaining battery energy and allows you to determine when a battery should be recharged. This product is a must-have device if you wish to understand your remaining battery time and the true health of your battery.

Key features

- › Large LCD screen for day and night viewing
- › View information including volts and amps, state of charge and remaining battery life
- › Low voltage warning
- › Perfect for use with recreational vehicle batteries, marine batteries, farming and many other applications
- › Compatible with any 12V Lead Acid battery
